

# POSITIVE SOLUTIONS OF NONLINEAR EQUATIONS WITH NATURAL GROWTH TERMS

BENJAMIN JAYE (UNIVERSITY OF MISSOURI)

We will present conditions for solvability along with global bounds for positive solutions of quasilinear and fully nonlinear operators perturbed by a ‘natural growth’ term. The model equations for our study are:

$$-\Delta_p u = \sigma |u|^{p-2} u + \omega$$

and

$$F_k(-u) = \sigma u^k + \omega$$

where  $\sigma$  and  $\omega$  are Borel measures. Here  $\Delta_p$  is the quasilinear  $p$ -Laplacian operator, defined by:

$$\Delta_p u = \operatorname{div}(|\nabla u|^{p-2} \nabla u)$$

and  $F_k(u)$  is the fully nonlinear  $k$ -Hessian operator, defined by

$$F_k(u) = \sum_{1 \leq i_1 < \dots < i_k \leq n} \lambda_{i_1} \dots \lambda_{i_k}$$

and  $\lambda_1, \dots, \lambda_n$  are the eigenvalues of the Hessian matrix of  $u$ . The results presented are joint work with Igor E. Verbitsky.
